Josab Water Solutions AB

August 15, 2022

Aqua Invent and Josab Aqualite made joint water test in Lomma

Together with our partner Aqua Invent, we carried out a water test of the emergency drinking water system in the city of Lomma in Skåne in mid-August. When a crisis occurs and the community water supply fails, Josab Aqualite™ can be used as the best drinking water treatment filter to quickly treat the nearby water source, ensuring that the surrounding residents have enough drinking water, in line with WHO standards.

Over the past two decades, Josab has provided sustainable emergency drinking water solutions to more than 30 countries around the world.

Josab signs a new agency agreement with Aqua Invent AB

Josab has signed an agency agreement with Aqua Invent in Lomma AB regarding the sale of filter material, Aqualite™ and Josab's portable water purification products. Aqua Invent obtains exclusivity regarding the sale of Aqualite™ in Sweden and Denmark for household products including pools. The agent also has the right to sell Aqualite™ in other areas but without exclusivity. The agent also has, without exclusivity, the right to market and sell Josab's portable units for water purification in Scandinavia and the rest of Europe.

Jane Jeppsson, CEO, Josab Water Solutions AB, says: "this is part of our strategy to increase both sales, in Sweden and on other markets, as well as to restart our operations with portable units for, among other things, crisis situations".

Josab Interim report 1 January – 30 June 2022

Josab water Solutions AB has newly issued its half year report which can be found at our our company homepage.

Josab + Clear Industry

Exhibition

Clear Industry participating China Sanitation Expo 2022

Between August 4 and 8, 2022, Xiamen, Fujian hosted the 2021-2022 Annual Meeting of the China Urban Environmental Sanitation Association and the China Environmental Sanitation Expo 2022. The event is considered to be one of the most authoritative and influential professional events in the Chinese waste treatment and sanitation industry.

Suzhou Clear Industry participates in the Sanitation Expo for the first time. The company won the "Excellence Innovation Process Award" at the annual meeting by its high-efficiency anaerobic technology for pretreatment of food waste. The new technologies introduced by the company during the Sanitation Expo were unanimously praised by industry professionals.

Clear Industry won the bid for Everbright

On 2nd of September, Clear Industry Suzhou, the Chinese subsidiary of Josab Water Solutions Group, received a bid-winning notice from China Everbright Environmental Energy Group. Clear Industry won the project of building a full-automated factory of breeding black soldier flies with a daily output of 8 tons of fresh larvae in a ten-year BOT model. The project will be built inside the Everbright Siyang base. The Everbright Siyang sells its pretreated organic residues to the black soldier fly breeding factory. As early as 2020, Clear Industry has provided the organic waste pre-treatment equipment AQUAQ for Everbright Siyang Base. The Clear Industry's pre-treatment process has high yield and low pollution and can process 100 tons of organic waste per day.

The successful operation of this project will greatly improve the resource utilization level of organic solid waste in China. Compared with the common practice of selling organic waste residues for livestock breeding, or on-site biotransformation, etc., the bio degradation process of organic waste by black soldier flies not only avoids the risk of secondary pollution in subsequent processes but can achieve the shortest circular chain converts organic waste residues into high-value protein products. At the same time, Clear Industry solution will make full use of the waste heat resources from the kitchen waste incineration plants to improve energy utilization efficiency. It is the most economical and sustainable low-carbon solution in the current organic waste treatment system.

Josab ZEOKIOSK's demo machine has finally reached Ivory Coast. With the joint efforts of our West African agent Yquos SAS and its partners, our equipment has entered the stage of installation and commissioning.

Thanks to Amihai Revah from Yquos, David Csiszar, technical director of Josab Hungary for organizing and guiding the installation and commissioning on site. Josab ZEOKIOSK™ is an Eco-friendly water purification system that can be installed in any place with electricity and a city water connection. It is simple to install and easy to maintain. The systems provide ATMs for paying units, and users can choose different volumes to deliver the exact amount and save water. Josab ZEOKIOSK™ is suitable for urban areas at the edge of streets and public spaces.
