Josab Water Solutions AB

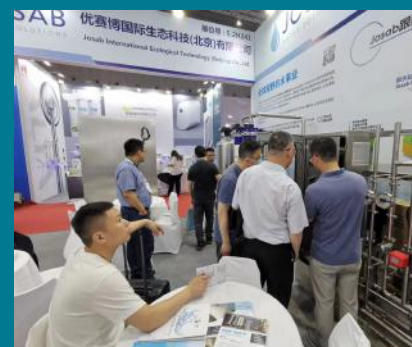

Josab's long-awaited debut in the Chinese market

We are delighted to announce that Josab International Ecological Technology Co., Ltd, a Chinese subsidiary fully owned by Josab Water Solutions AB, had a remarkable presence at the Aqua-tech 2023 China exhibition. We owe our success to the unwavering support of our valued partner, Shandong Shuifa Group Shuifa Qingdao Haohai Technology Co., Ltd. Together, we introduced a range of innovative products tailored specifically for the Chinese market, receiving an overwhelming response from the exhibition attendees.

Our entry into this dynamic market signifies a new thinking mode introduced by Josab, especially in a landscape saturated with high-energy consumption and low-efficiency as reverse osmosis membrane water treatment products. We are committed to promoting sustainable development by offering innovative and ecologically friendly drinking water treatment technology that significantly reduces energy consumption. With our solutions, we aim to revolutionize the industry and contribute to a more sustainable future.

Josab products showed at Aquatech 2023 include:

- ① Zeobox: low energy consumption, maintenance-free, no wastewater, all-in-one water treatment and distribution machine
- ② Josab Fountain 5-step water purification system for household, no electricity need, no wastewater.
- ③ Josab Aqua-UF , intelligent Aqualite ultrafiltration system for central drinking water solutions.

Josab

New Product Launching – Josab Fountain

The Josab Fountain Five-Stage Precision System is a water purification system that requires no electricity and produces no wastewater. It uses a multi-layer, high-precision water filtration technology, including Josab's own Aqualite™ filtermaterial. This device effectively removes heavy metals, arsenic, bacteria, antibiotics and unpleasant odors from tap water while retaining the beneficial minerals of essential trace minerals.

- No electricity or wastewater, save water and electricity effortlessly.
- Multiple installation methods, suitable for both new and old houses.
- 100% chemicals free.
- Water pressure can be monitored with water pressure gauge.
- No water discharge, 100% utilization of water resources.
- Preserves beneficial minerals in water to supplement daily required trace elements.
- Filtration accuracy of 0.01 micron, effectively removing bacteria.
- Durable 304 stainless steel body to prevent secondary pollution.
- Ultrafiltration technology combined with a multi-layered five-stage filtration system. IVL.

Josab actively involves in rebuilding Ukraine

In collaboration with the sister companies of the Vimab Group, Josab is excited to announce our participation in the prestigious "Rebuild Ukraine" exhibition, to be held in Warsaw this November. This aid exhibition boasts participation from various European countries, and we are truly honored to be among the 30 selected Swedish companies invited to showcase our contributions.

Highlighting our commitment to supporting Ukraine, Larslap, a subsidiary of the Vimab Group, had already made a significant contribution in autumn 2022 by donating a comprehensive set of portable valve grinding equipment to aid in the country's reconstruction efforts.

Moreover, Josab is proud to offer our emergency water treatment system and containerized water treatment plant, which provide the most suitable and efficient solutions for addressing Ukraine's urgent need for clean and safe water. We are dedicated to assisting in the reconstruction process and look forward to making a positive impact in Ukraine's journey towards recovery.
